Career Objective

A real go-getter, detail-oriented Data Engineer with experience building production data pipelines, workflow automation, API integrations, and cloud infrastructure across AWS and GCP. Strong background in Python, Airflow/MWAA, PostgreSQL, Terraform, and backend development, with prior experience in data analytics and e-commerce platforms.

Technical knowledge

Programming Languages: Python, Typescript, Java, PL/pgSQL

Data Engineering: Airflow, MWAA, AWS Glue, Snowflake, Iceberg, Redshift, PostgreSQL, MySQL, SQL Server, Oracle, MongoDB

Backend: NestJS, FastAPI, Django, Flask, Supabase, Redis, RabbitMQ, Celery

AWS: MWAA, S3, Lambda, SQS, EventBridge, Glue, Redshift, DynamoDB

GCP: Cloud Run, Cloud Storage

DevOps / Infrastructure: Terraform, Heroku, Github Actions, Docker, Kubernetes

BI / Analytics: Power BI, Grafana, Excel, Google Sheets

OS / Environment: Linux, Ubuntu, WSL

Working Experiences

Data Engineer | FPT Software

Full-time | Feb 2026 – Present

Tech stacks: Python, MWAA, S3, Lambda, SQS, Glue, DynamoDB, Redshift, Snowflake, Iceberg, Terraform, Excel/Spreadsheets.

- Responsible for integrating client's data source to V3 and V4 system:
 - Develop different mechanisms to retrieve and enter data from different sources (**SFTP, WebDav, BigQuery, S3 cross-account/cross-region replications, S3 KMS encryption, Lambda ...**) to the company's infrastructure.
 - Owned **Terraform IaC development** for AWS services including EventBridge, SQS, Lambda, S3 policies, and IAM roles, ensuring scalable integration of new systems into the platform.
 - Designed and implemented an **AWS Transfer Family SFTP ingress architecture** for client data ingestion, integrating **Elastic IPs, Internet Gateway routing, subnet NACLs, security groups, and S3 Gateway Endpoint** for private S3 access; validated the **end-to-end TCP/SFTP flow** from an external client with **Terraform**.
 - Designed and deployed a high-precision execution date mechanism with millisecond granularity **across 30+ Lambda functions** through **Terraform**, allowing multiple Airflow DAG executions to be triggered reliably within the same second.
- Co-led the architecture and implementation of a greenfield MWAA/Airflow testing ecosystem covering test-data generation, daily workflow triggering, V4 validation, and automated reporting, expanding test coverage to all tables within a schema and reducing manual testing workload by 50%.
- Supported and onboarded fresher and OJT engineers across ongoing projects..

Data Engineer | ADA (Acquiring Customore)

Full-time | Jun 2024 – Feb 2026

Tech stacks: Python, Typescript, Airflow, Heroku, Bytebase, Supabase, Django, RabbitMQ, Celery, FastAPI, Docker, PostgreSQL, PL/pgSQL, Redis, MongoDB, Excel/Spreadsheets, AWS S3, Dropbox.

- Maintain all daily services for Analytics members, ensure **API's data up to D-1** and **Brand Portal & Seller Center data up to D-2** for > **300+ sellers on all platforms**.
- Migrate RabbitMQ & Celery messages queues infrastructures to the company's Airflow platforms.
 - **Migrated a legacy 5+ year old RabbitMQ-based pipeline from GitHub to Airflow on Bitbucket**, in collaboration with Tech Lead, creating the **reference implementation used across all marketplaces for standardized ETL development**.
- Refactor/integrate/document APIs' from Shopee, Lazada, TikTok to company's backend system:
 - Refactor TikTok's endpoints in microservices to TikTok version 202309, 202407 respectively.
 - Optimized Shopee API integrations by **batching 50 orders per iteration (vs. 1 before)** & integrating Shopee API to auto collect ratings, **cutting API requests by 95% and reducing Analytics' manual workload by 80% (~20 hrs/week)**.
- Main PIC of building/updating/maintaining Supabase's backend:
 - Co-designed and implemented ETL pipelines in PL/PostgreSQL to generate valid JSON schemas and schedule inputs to pgmq, **enabling 100% developers' Chrome-extension to pull and execute tasks**, helping the company to outsource fixing data to clients' side.
 - **Integrated queue with AWS S3 and Airflow backend**, enabling automated scraping → data upload → ETL workflows across multiple marketplaces.
 - In charge of building Supabase's backend, including schemas, table formats, constraints, triggers functions, edge functions, seed data, unit tests, and integration tests, **ensuring system reliability and scalability for > 500+ sellers**.
 - Successfully **maintained and hot-fix 100% uptime of Supabase-powered pipelines** during Mega Days (critical sales events with 10x traffic), outputting > **327+ reports collected and uploaded for Shopee, Lazada, TikTok marketplaces every 15 minutes**.

Data Engineer | Datadude

Contract / Part-time | Jun 2026 – Present

Tech stacks: Python, Typescript, Google Cloud Storage, NestJS, Docker, React Native, PostgreSQL

- Responsible for developing new data/backend-related mobile application features
 - Designed and implemented a backend-driven SQL sandbox platform for isolated student query execution, **replacing frontend-only SQLite execution with a NestJS API, SQL environments, Docker-based execution**, and GCS-backed dataset initialization, supporting multiple dialects

Data Analyst | Customore

Full-time | Dec 2023 – Jun 2024

Tech stacks: Python, PostgreSQL, PowerBI, Spreadsheet/Excels, Dropbox.

- In charge of maintaining PBI's dashboard as requested by all clients.
- Manage end-to-end project/roadmap and collaborate with other FTEs to complete clients' requests.
- Led monthly data checks, ensuring data accuracy and efficient product/bundle mapping across clients.

Educational Background

Business Data – Rouen program of Open University - GPA: 3.66/4.0

August 2021 – December 2024

Certifications

Microsoft Office Specialist (Word, Excel, Powerpoint) | Microsoft

Visit certifications: [Here](#)

Python for Data Analytics | Datapot

Visit certifications: [Here](#)

Analyzing and Visualizing Data with Microsoft Power BI | Datapot

Visit certifications: [Here](#)

Querying Data with Transact-SQL | Datapot

Visit certifications: [Here](#)

Azure Data Fundamentals | Datapot
