Career Objective

A real go-getter, detail-oriented Data Engineer with a strong foundation in both data analytics & engineering seeking growth opportunities in the tech industry. Specialized in E-Commerce data pipelines, automation, and API integrations, with a proven ability to drive impactful solutions and deliver business value.

Technical knowledge

Programming Languages: Python, Typescript, Java, PL/postgreSQL

Databases: MySQL, SQL Server, PostgreSQL, Oracle, MongoDB

Back-end: Bytebase, Supabase, Redis, Django, Flask, Celery, Fast API

Jobs Scheduler: MWAA, Airflow, RabbitMQ, Celery, Redbeat Scheduler, PgCron, CronJobs

Cloud & DevOps: AWS S3, AWS Lambda, AWS SQS, AWS Glue, AWS Redshift, AWS DynamoDB, AWS

Snowflake, AWS Iceberg, Heroku, Github Actions, Docker, Kubernetes

Business Intelligences: PowerBI, Grafana

Operating System: WSL, Ubuntu

Others: Excel, Google Spreadsheets, Power Automate, Dropbox

Working Experiences

Data Engineer | FPT Software

Feb 2026 – Present

Tech stacks: Python, MWAA, AWS S3, AWS Lambda, AWS SQS, AWS Glue, AWS DynamoDB, AWS Redshift, AWS Snowflake, AWS Iceberg, Terraform, Excel/Spreadsheets.

- Responsible for integrating client's data source to V3 and V4 system:
 - Develop different mechanisms to retrieve and enter data from different sources (**SFTP, WebDay, BigQuery, S3 replication ...**) to the company's infrastructure.
 - Maintain and develop ETL pipelines (**Integrating new data types, handling different data formats**) ensuring **100% data transition** on release date.
 - Migrating client's **opt-out (Permission control)** architecture to **opt-in (Role-based access control)** architecture across 2 different Snowflake accounts. Ensuring **100% data** is displayed through role access.
- Collaborate in a 2 people team-size to set up code base, micro-services, and architecture design for a green field project:
 - In charge and implement **MWAA Airflow DAG orchestrator** logic to scale up test scope reaching all tables included in 1 schema.
 - Develop **end-to-end MWAA Airflow DAG executor** to streamline the execution of generating data, trigger system's daily workflow, verify V4 system's daily output, and make testing reports. Reducing **50% testing workload** for test team.
 - Init tester's test cases (**System test & Integration test**) to Bluelake's system, creating standardized ETL development for team members to work on.

Tech stacks: Python, Typescript, Airflow, Heroku, Bytebase, Supabase, Django, RabbitMQ, Celery, FastAPI, Docker, PostgreSQL, PL/postgreSQL, Redis, MongoDB, Excel/Spreadsheets, AWS S3, Dropbox.

- Maintain all daily services for Analytics members, ensure **API's data up to D-1** and **Brand Portal & Seller Center data up to D-2** for **> 300+ sellers on all platforms**.
- Migrate RabbitMQ & Celery messages queues infrastructures to the company's Airflow platforms.
 - **Migrated a legacy 5+ year old RabbitMQ-based pipeline from GitHub to Airflow on Bitbucket**, in collaboration with Tech Lead, creating the **reference implementation used across all marketplaces for standardized ETL development**.
- Refactor/integrate/document APIs' from Shopee, Lazada, TikTok to company's backend system:
 - Refactor TikTok's endpoints in microservices to TikTok version 202309, 202407 respectively.
 - Optimized Shopee API integrations by **batching 50 orders per iteration (vs. 1 before)** & integrating Shopee API to auto collect ratings, **cutting API requests by 95% and reducing Analytics' manual workload by 80% (~20 hrs/week)**.
- Main PIC of building/updating/maintaining Supabase's backend:
 - Co-designed and implemented ETL pipelines in PL/PostgreSQL to generate valid JSON schemas and schedule inputs to pgmq, **enabling 100% developers' Chrome-extension to pull and execute tasks**, helping the company to outsource fixing data to clients' side.
 - **Integrated queue with AWS S3 and Airflow backend**, enabling automated scraping → data upload → ETL workflows across multiple marketplaces.
 - In charge of building Supabase's backend, including schemas, table formats, constraints, triggers functions, edge functions, seed data, unit tests, and integration tests, **ensuring system reliability and scalability for > 500+ sellers**.
 - Lead deploying, testing, and integrating microservices for Supabase with the Products team on Heroku's staging environments for new features development.
 - Successfully **maintained and hot-fix 100% uptime of Supabase-powered pipelines** during Mega Days (critical sales events with 10x traffic), outputting **> 327+ reports collected and uploaded for Shopee, Lazada, TikTok marketplaces every 15 minutes**.

Tech stacks: Python, PostgreSQL, PowerBI, Spreadsheet/Excels, Dropbox.

- In charge of maintaining PBI's dashboard as requested by all clients.
- Manage end-to-end project/roadmap and collaborate with other FTEs to complete clients' requests.
- Led monthly data checks, ensuring data accuracy and efficient product/bundle mapping across clients.
- Fulfill products' features, category mapping, and sellers' configurations for all clients.
- Work with Products & Account members to process clients' recurring requests & ad-hoc requests.

Educational Background

Certifications

Microsoft Office Specialist (Word, Excel, Powerpoint) | Microsoft

Visit certifications: [Here](#)

Python for Data Analytics | Datapot

Visit certifications: [Here](#)

Analyzing and Visualizing Data with Microsoft Power BI | Datapot

Visit certifications: [Here](#)

Querying Data with Transact-SQL | Datapot

Visit certifications: [Here](#)

Azure Data Fundamentals | Datapot

Visit certifications: [Here](#)

Teaching Assistant Certificates | British Councils

Visit certifications: [Here](#)

Languages

Vietnamese: Maternal language

English: IELTS 7.0

French: B1.2
